

# Ravi Akhouri

## Experience

August 2021– Present

Angular UI Developer • Senior Software Engineer •  
**LTIMindtree Ltd (formerly Mindtree)**

Currently I am working for **Aflac-Business Services (An American Based Insurance Company)**. My Role and Responsibility is pretty much like previous Projects.

I have worked in one of the **TVS Motors-PIP App (A Product Based Company into Automobiles (2, 3 wheelers Vehicle))**, where We were given the responsibility to build the frontend application from scratch. I have implemented the login (Authentication), business logic, interceptors, validations and UI design for both desktop and mobile view along with integration of rest API's. We have also used the oops concept to make the code more reliable, readable and understandable. The full form of Application is **Profit Improvement Plan (PIP)**, through this application, there Employees will be able to suggest changes, which will lead to production cost reduction and increased profits. The Suggestions will go through an approval process including finance approval and department approvals.

Before this, I worked with **Sennheiser-EPOS Manager (A Product Based Company into Audio Devices (such as headphone, EarPods and many more))**, where we moved the old application which was based on angularjs1.x to Angular 11. We were responsible for implementing the Business logic, integration of rest API's, validations, oops, unit testing (**Jasmine Karma**), hicharts.

October 2019 – August 2021

Angular UI Developer • Project Engineer • **Wipro Ltd**

I have worked in GOG-IFMS (**Finance Department of Government of Gujarat**) where I was working as an Angular Developer. We were given the responsibility of **Module Lead** in DDO Module to make a coordination and to contribute towards the completion of Module and subsequently approaching towards SIT and then UAT Release. To handle similar looking screens but with different functionality and behavior using configuration layer, created each section as separate components and a common configuration component and container that handles all the different child components. The Configuration was created to handle the behavior of different screens such as default fields values, remove some fields and add some fields, remove section and add section, changing the contents of DOM. A Configuration
